Abhishek Verma

Software Engineer - Java Backend Developer

Noida, India | * 6307801566 | abhishek.verma.6561@gmail.com | linkedin.com/in/1-abhishek-verma | github.com/Pseudo-iitian

Professional Summary

Software Engineer with experience in building **scalable financial microservices** in the **lending domain**. Skilled in **Java**, **Spring Boot**, **REST APIs**, **Kafka**, and **PostgreSQL**, with hands-on experience in **Loan Management Systems (Apache Fineract)** across the **end-to-end loan lifecycle**. Worked on **collection and settlement posting** using **Amazon SQS**, **UPI/NACH** integration, and a **rule-based NPA engine**. Improved **AWS database performance**, reducing writer DB utilization from **99% to 5–20%**. Strong in **event-driven architecture**, **system design**, and **distributed systems**.

Technical Skills

Languages: Java, SQL, PL/pgSQL
Core Java: OOP, Collections Framework, Streams API, Multithreading, Concurrency (ExecutorService, Thread Pools, Locks), Exception Handling, JVM Memory Management
Backend: Spring Boot, Spring Batch, Spring Security, REST APIs, API Design, Microservices, Event-Driven Architecture, Distributed Systems, System Design
Messaging: Apache Kafka, AWS SQS
Databases: PostgreSQL, MySQL, Redis, Query Optimization, B-Tree Indexing, Stored Procedures, ACID Transactions, Flyway
Cloud & DevOps: AWS (Lambda, CodePipeline, CodeCommit), Docker, Kubernetes, CI/CD, Git, GitHub
Fintech: UPI Integration, e-NACH, Apache Fineract LMS, Loan Lifecycle Systems
Fundamentals: Data Structures, Algorithms, DBMS, Design Patterns (Strategy, Factory, Singleton), SOLID Principles
Methodology: Agile (Scrum), Sprint Planning, Code Reviews

Experience

Rapipay Fintech Private Limited — Noida, India
Software Engineer — *08/2024 – Present*

- Deployed a robust **Java 17**, **Spring Boot**, and **AWS SQS** engine that ensures instant **REST API** delivery of all collections and **UTR**-confirmed settlements to **NBFC** partners, processing over **50K records**.
- Automated **UPI/e-NACH** due and overdue presentation through **Digio** and Engineered **Kafka** bulk-upload pipelines for recovery, scaling throughput to **30K+ daily transactions**.
- Designed an RBI-compliant **NPA** engine on **DPD** rules: loans beyond **90 DPD** are classified as NPA and later collections go straight to principal, running on **100K+ loan records** with **100% accuracy**.
- Integrated **Apache Fineract LMS** with the LOS for multiple NBFCs, covering restructuring, rescheduling, foreclosure, settlement, cancellation and write-off; lender fund-transfer workflows brought **zero manual steps** to early closure and EMI reconciliation.
- Brought **AWS writer DB** utilization down from **99% to 5–20%** by rewriting slow **PostgreSQL** queries, fixing N+1 calls and adding **B-tree indexes**, which also trimmed query latency by **40%** on **1M+ record** tables.
- Led technical design talks with the payments team and **3+ financial partners** to finalize API contracts, so each integration shipped with clear specs and fewer rework cycles.

Projects

Loan Origination & Management System | *Java, Spring Boot, PostgreSQL, Kafka, Spring Batch, AWS SQS*

- Moved EMI processing to **event-driven microservices** on **Kafka**, shrinking latency from **7s to under 30ms** (**99%+ faster**) and improving scalability and fault tolerance.
- Tuned repayment and settlement workflows to process **100K+ transactions/month** at **sub-200ms** latency using **Spring Batch**.

UPI & e-NACH Collection Integration with Digio | *Java, Spring Boot, Digio SDKs, REST APIs*

- Designed the end-to-end **UPI** and **e-NACH** collection flow with **Digio**, lifting UPI-based repayment adoption by **50%**.
- Delivered scalable payment services that handle **30K+ UPI debit transactions daily** across distributed financial systems.

BikeDone: Mechanic at Your Doorstep | *Java, Spring Boot, PostgreSQL, Spring Security, AWS SQS, Razorpay, WebSocket*

- Built an **AWS SQS** dispatch engine that auto-assigns the nearest mechanic (**5–25 km** radius, with retries), plus real-time chat and live tracking via **WebSocket (STOMP)**.
- Implemented platform security with **JWT** auth, **role-based access control**, **AES** encryption and OTP login via **Firebase/AWS SNS**; integrated **Razorpay** with idempotent webhooks to prevent duplicate payments.

Education

Abdul Kalam Technical University (KIET Group of Institutions) — Delhi-NCR, India
Bachelor of Technology in Computer Science (CGPA: 8.2) — *11/2021 – 06/2025*
