Abhishek Verma

Software Engineer — Backend Engineer — Java Spring Boot Developer

+91-6307801566 | abhishek.verma.6561@gmail.com | linkedin.com/in/1-abhishek-verma | github.com/Pseudo-iitian

Summary

Software Engineer with experience building scalable backend systems and fintech platforms using Java, Spring Boot, PostgreSQL, Kafka, Redis, Docker and CI/CD. Strong in distributed systems, microservices, multithreading and performance optimization.

Experience

Rapipay Fintech Private Limited 08/2025 – Present

Software Engineer - Backend & Fintech Systems (Java/Spring Boot) *Noida, India*

- *Tech Stack: Java 17, Spring Boot, PostgreSQL, Kafka, Redis, Docker, Kubernetes, Jenkins, REST APIs*
- Architected a configurable settlement posting engine using Spring Boot microservices and REST APIs; accelerated partner integration TAT (Turnaround Time) by 70% for 3+ partners.
- Integrated Amazon SQS and Apache Kafka for asynchronous communication, processing 50K+ daily events and increasing fault tolerance by 40%.
- Engineered an RBI-compliant NPA (Non-Performing Asset) classification engine using DPD (Days Past Due) logic; processed 100K+ records with 100% accuracy.
- Streamlined transaction-level collection mapping, improved reconciliation accuracy to 99.5%, saving 15+ manual hours per week.
- Scaled Kafka-based event pipelines for NACH (National Automated Clearing House) and UPI processing to 30K+ daily transactions, ensuring full traceability.
- Optimized PostgreSQL stored procedures and indexing strategies, improving query response time by 40% on datasets of 1M+ records.

Rapipay Fintech Private Limited 08/2024 – 08/2025

Product Engineering Intern *Noida, India*

- *Tech Stack: Java, Spring Boot, PostgreSQL, SQL, REST APIs, Git*
- Refined PostgreSQL query performance on large-scale financial datasets (500K+ records), achieving a 30% improvement in reporting execution time.
- Facilitated backend lending services for UPI collection, supporting 20K+ daily transactions with accurate DPD calculations and ledger consistency.
- Automated Daily Collection and Loan Summary Reports by aggregating data from microservices, improving stakeholder reporting efficiency by 60%.
- Resolved 15+ critical production issues through Root Cause Analysis (RCA), reducing data inconsistencies by 20%.

Education

Abdul Kalam Technical University 11/2021 – 06/2025

B.Tech in Computer Science and Engineering (CGPA: 8.2/10.0) *Ghaziabad, UP*

Technical Skills

Languages: Java, SQL, C, C++
Frameworks: Spring Boot, Spring Security, Hibernate, JPA
Backend: REST APIs, Microservices, Distributed Systems, Multithreading, System Design
Messaging: Kafka, Amazon SQS, CQRS, Saga, Event-Driven Architecture
Database: PostgreSQL, MySQL, Redis
DevOps: Docker, Kubernetes, Jenkins, GitHub Actions, CI/CD
Testing/Tools: JUnit, Mockito, Postman, Git, Flyway, JDBC, Zipkin
Domain: Fintech, Reconciliation, NPA, EMI, Ledger Accounting

Projects

Loan Management System | *Java, Spring Boot, PostgreSQL, JPA, Docker* 2026

- Developed scalable Loan Management System using Spring Boot microservices, PostgreSQL, REST APIs and Docker.
- Designed an EMI calculation engine leveraging a reducing-balance algorithm, incorporating scheduler-driven reconciliation, which improved loan processing times by 40% and minimized errors.
- Added JWT authentication using Spring Security and unit testing using JUnit/Mockito.
